

**Myth:**

You are protected from an active shooter attack while at work in your office building, or in a shopping mall.

**Fact:**

**Over 60%** of active shooter events take place in non-academic buildings of all kinds; commercial, government, hospitals and malls.

**Mitigating Active Shooter Incidents in Buildings.**  
**Trusted Protection from the Leader in Gunshot Location Technology.**

**Overview**

Americans spend about half of their waking hours inside the buildings where they work. Once inside, employees assume that they are safe. The recent shocking event in November 2014 in Ottawa, Canada where a gunman killed an honor guard soldier and then opened fire inside a nearby building has changed our once safe preconceived notions of what building security means. Increasing a facility's security guards are not adequate in an attack.

The FBI just-released "A Study of Active Shooter Incidents in the United States Between 2000 and 2013" which contains a full list of the 160 incidents used in study. These incidents resulted in a total of 1,043 casualties (486 killed, 557 wounded—excluding the shooters). The largest percentage of incidents take place in non-academic settings. In fact, 45.6%, took place in a commercial environment. An additional 12.5% took place at government and health care facilities.

ShotSpotter® SiteSecure™ is for indoor coverage in the event of an active shooter attack. These buildings could include, but are

not limited to, federal, state and city government buildings as well as commercial facilities. Buildings that can be monitored and protected by ShotSpotter SiteSecure could be any size footprint, with any size square footage and number of floors.

ShotSpotter instantly detects incoming gunfire and notifies those who most need that information in real-time; Security Operations Center personnel and law enforcement first responders. ShotSpotter has an 18-year proven track record of detecting gunfire in a wide-variety of environments.

## Benefits

- ShotSpotter SiteSecure is the only gunshot location technology capable of detecting a full-spectrum of potential threats—both subsonic and supersonic rounds, as well as explosives.
- ShotSpotter SiteSecure has the ability to provide fully contextualized alerts within 45 seconds (number of rounds fired, the location of one or more shooters inside the building, and streaming audio files of the event) to designated recipients including your organization's security operations center, or public safety dispatch.
- Knowing precisely where shots were fired enables first responders to aid victims faster.
- SiteSecure provides rapid incident detection and location. When coupled with the rapid deployment of armed first responders, it can reduce the impact of an active shooter who penetrates building security checkpoints.
- Cost effective: cloud-based system requires no customer overhead.

## Detection Capabilities

- Detects a wide range of sharp acoustic events (e.g. explosions, subsonic, supersonic gunfire)
- Wide area incident detection: fired and directed anywhere within coverage area

## Monitoring Service

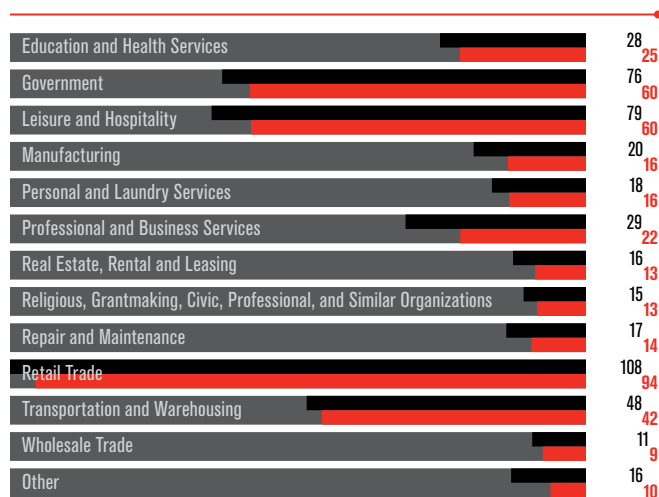

- Audio snippet of gunfire incidents in real-time
- No on-premises equipment other than sensors
- Remote and transparent updates and support

## Trusted by First Responders

- Credible, trusted, given higher priority
- Court accepted evidence case law—proven accuracy
